▶ Investment commentary

Mitsubishi Motors presented a new medium-term plan in May, marked by a deepening of its cooperation with Nissan. The most important announcement concerns the joint development of a pickup truck for the North American market, as well as the joint development and production of kei cars in Japan, in both internal combustion engine and electric versions. This strategy confirms the group's intention to focus its resources on segments where it still has a clear identity: compact vehicles in Japan, SUVs, pickup trucks, and gradual electrification internationally.

In the United States, the pickup project is particularly interesting, as it could allow Mitsubishi to return to a more emotional and differentiated segment than standard mass-market vehicles. The North American market remains highly competitive, but it still places significant value on SUVs, crossovers, pickup trucks, and vehicles designed for family or utility use. For Mitsubishi, the objective is not to cover the entire market, but to strengthen its brand image around robustness, outdoor use, plug-in hybrid technology, and more distinctive models.

In Japan, the collaboration on kei cars is equally strategic. This segment remains important for local mobility, particularly in regional areas, where compact, economical, and easy-to-use cars continue to be highly relevant. The development of electric versions also allows the company to adapt its product offering gradually to new environmental constraints, without creating a sharp break with existing usage patterns.

The plan is part of a broader industrial rationalisation effort. Mitsubishi plans to invest around ¥1 trillion and targets, by fiscal year 2029, operating profit of ¥160 billion, an operating margin of 4.5%, and ROE of 10%. Beyond the numbers, the central message is that Mitsubishi is seeking to make better use of its alliance with Nissan in order to accelerate product renewal, share development costs, and strengthen its presence in a few key markets rather than spreading itself too thinly.

Glossary

<p>ALPHA</p> <p>Alpha is equal to the average return on the product, i.e. the value added by the manager after deducting market influences over which the manager has no control. This calculation is expressed as a percentage.</p>	<p>BETA</p> <p>Beta is an indicator of a fund's sensitivity relative to its benchmark. A fund with a beta of less than 1 is likely to fall less than its benchmark, while a fund with a beta of greater than 1 is likely to fall further than its benchmark.</p>	<p>RECOVERY PERIOD</p> <p>The recovery period (expressed in days) is the number of days needed to recoup the losses incurred after a maximum loss is sustained. Maximum loss is the largest loss the fund has experienced.</p>
<p>SRR</p> <p>The SRR (Synthetic Risk & Reward Indicator: Risk indicator based on the volatility over a period of 260 weeks). Historic data such as those used to calculate the synthetic indicator may not be a reliable indication of the future risk profile. The risk category associated with this Fund is not guaranteed and may change over time. The lowest category does not mean «riskfree».</p>	<p>TRACKING ERROR</p> <p>Tracking error is a measure of the risk taken by a fund relative to its benchmark. It is given by the annualised standard deviation of a fund's performance relative to its benchmark. The lower the tracking error, the closer the fund's risk profile is to that of its benchmark.</p>	<p>VOLATILITY</p> <p>Volatility denotes the annualised standard deviation of returns in a historical series (fund/index). It quantifies a fund's risk by indicating how dispersed around the average the fund's returns are. The volatility of a money market fund is typically less than 1%. It is around 0.4% (or 40 basis points of volatility) for such funds. However, the volatility of an equity fund, which is invested in a riskier asset class, is often greater than 10%.</p>
<p>SHARPE RATIO</p> <p>The Sharpe ratio measures the difference between the return on a portfolio and the risk-free rate of return (i.e. the risk premium), divided by the standard deviation of the return on that portfolio (volatility). A high Sharpe ratio is considered good.</p>	<p>SFDR</p> <p>The SFDR (Sustainable Finance Disclosure Regulation) is a regulation intended to promote sustainability in the European financial sector. In particular, it proposes a typology to better identify assets falling under the banner of sustainable finance, notably through three categories: Article 6, Article 8 and Article 9 funds.</p>	<p>SRI</p> <p>The SRI (Synthetic Risk Indicator) provides an assessment of the product's risk relative to that of other products. It indicates the probability of the product incurring losses in the event of market movements or of us not being able to pay you. The risk indicator assumes that you will hold the product for the minimum recommended investment period.</p>
<p>SIX FINANCIAL STAR RATING</p> <p>The rating is based on the analysis of the return and risk of each fund within its Europe performance category, using a minimum three-year track record. A score is calculated by comparing the fund's performance and volatility with those of its category index, and then converted into a number of stars according to a quintile ranking. A "junior" rating is applied to funds with a two- to three-year history, by linking their performance to their category index to reach the required three years. Categories or funds that are too heterogeneous, insufficiently documented, or with incomplete data are excluded from the process.</p>	<p>MAXIMUM DRAWDOWN</p> <p>The maximum drawdown is the return over the worst possible investment period. It indicates the maximum loss an investor could have sustained if they had invested in the fund at the peak of the observation period and liquidated their investment at the lowest point in that period.</p>	<p>INFORMATION RATIO</p> <p>The information ratio is an indicator of the extent to which a fund has underperformed or outperformed its benchmark. A positive information ratio indicates outperformance. The higher the information ratio, the better the fund. The information ratio indicates the extent to which a fund has outperformed an index, taking into account the risk incurred.</p>
