

Annex of pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Ofi Invest European Convertible Bond LEI: 9695001RWZ80OE1ZIZ97

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Bood tille illianoidi product nave a cactamanie illivocation objective.			
● ● □ Yes			
☐ It will make a minimum of sustainable investments with an environmental objective: %	☑ It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 15% of sustainable investments

☐ It will make a minimum of sustainable investments with a social objective: %	☐ It promotes E/S characteristics, but will not make any sustainable investments		

What environmental and/or social characteristics are promoted by this financial product?

Sustainability
indicators measure
how the
environmental or
social characteristics
promoted by the
financial product
are attained.

The Sub-Fund Ofi Invest European Convertible Bond (hereinafter referred to as the "Sub-Fund") promotes environmental and social characteristics. In order to assess issuers' environmental, social and governance practices, the Management Company relies on the internal ESG rating methodology.

The themes taken into account in reviewing good ESG practices are:

- Environmental: Climate change Natural resources Project financing Toxic waste Green products.
- Social: Human capital Societal Products and services Communities and human rights
- Governance: Governance structure Market behaviour

The comparison SRI universe is consistent with the Sub-Fund's reference benchmark.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by the Sub-Fund are:

- The Sub-Fund's average ESG score: for the method used to calculate this score, please refer to the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- The average ESG score of the SRI universe: to verify that the average ESG score of the Sub-Fund outperforms the average ESG score of the SRI universe.
- The Sub-Fund's share of sustainable investments
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The Sub-Fund will invest at least 15% of its net assets in bonds and debt securities that meet the definition of sustainable investment of Ofi Invest AM.

To qualify as a sustainable investment, it must meet the following criteria:

- Make a positive contribution or bring a benefit to the environment and/or society;
- Not cause significant harm;
- Apply good governance.

Our definition of sustainable investment is set out in detail in our Responsible Investment Policy, available on our website at the following address: https://www.ofi-invest-am.com/pdf/principes-et-politiques/politique-investissement-responsable.pdf

 How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

In order to ensure that the issuers under review Do No Significant Harm (DNSH) in terms of sustainability, Ofi Invest AM analyses issuers in terms of:

- Principal Adverse Impacts (PAI indicators) for sustainability within the meaning of the SFDR
- · Activities that are controversial or considered sensitive in terms of sustainability
- · The presence of controversies deemed to be very severe
- How were the indicators for adverse impacts on sustainability factors taken into account?

Issuers exposed to the following adverse impact indicators are considered to be non-sustainable investments:

- Exposure to fossil fuels (PAI indicator 4),
- exposure to activities related to types of controversial weapons, such as cluster bombs or antipersonnel mines, biological weapons, chemical weapons, etc. (PAI indicator 14);
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI indicator 10)

Moreover, controversial activities or activities deemed to be sensitive in terms of sustainability are considered as unsustainable. Adverse impacts are analysed via Ofi Invest AM's sector-based (tobacco, oil and gas, coal, palm oil, biocides and hazardous chemicals) and norms-based policies (Global Compact and ILO fundamental conventions, controversial weapons), published on our website. Investments may not be made in companies with a negative screening.

Very severe controversies ("level 4" environmental and societal controversies as well as "level 3" social and governance controversies) cannot be considered sustainable, according to our definition.

• How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The exposure of issuers to controversies related to violations of fundamental human rights, as described in the UN Global Compact and the OECD Guidelines for Multinational Enterprises (PAI indicator 10), is a reason for exclusion (see above).

Issuers exposed to such controversies, whose severity level is deemed to be very high or high, on all social, societal and environmental issues, cannot be considered sustainable according to our definition.

More specifically, investments may not be made in issuers exposed to "level 4" (very high) environmental and societal controversies as well as "level 3" (high) for social and governance controversies, i.e., the highest on our proprietary rating scale.

These E, S and G issues bring together all themes covered by the OECD Guidelines and the Global Compact.

These exclusions apply to issuers considered as "sustainable", according to our definition, in addition to the norm-based exclusion policy on Non-Compliance with the Global Compact Principles and ILO fundamental conventions.

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Principal adverse
impacts are the
most significant
negative impacts
of investment
decisions on
sustainability factors
relating to
environmental,
social and employee
matters, respect for
human rights, anti-
corruption and anti-
bribery matters.

⊠ Yes	□ No

The methods of assessment by the Management Company of investee companies, for each of the principal adverse impacts linked to sustainability factors, are as follows:

	Adverse impact indicator	Metric		
	Climate and other environment-related ind	icators		
Greenhouse gas	1. GHG emissions	Scope 1 GHG emissions		
emissions		Scope 2 GHG emissions		
		Scope 3 GHG emissions

For more information, please refer to the "Statement on the Principal Adverse Impacts of Investment Decisions on Sustainability Factors", which can be found on the Management Company's website [in French]: https://www.ofi-invest-am.com/finance-durable

What investment strategy does this financial product follow?

The investment strategy of this Sub-Fund consists of investing, as a minimum, 60% of its net assets in European convertible bonds. It will be exposed continuously on one or more European interest rate markets. In addition, the portfolio shall be invested, on a secondary basis, in shares which originate solely from the conversion of bond issues into equity. Issuers consider environmental, social and governance (ESG) criteria.

For more information on the investment strategy, please refer to the section on investment strategy in the prospectus.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

• What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The binding elements of the investment strategy used to select the investments to attain each of the environmental and social characteristics promoted by the Sub-Fund are as follows:

The Sub-Fund adopts a "rating improvement" approach and therefore commits to ensuring that the average ESG score of the portfolio is higher than the average ESG score of the EMEA Convertible Bonds SRI universe (and that the assets subject to an ESG rating represent at least 90% of the assets (excluding cash, UCIs and derivatives).

In assessing issuers' ESG practices, the Sub-Fund considers the following pillars and themes:

- Environmental: climate change, natural resources, project financing, toxic waste, green products;
- Social: employees, customers, suppliers and civil society, with reference to universal values (in particular: human rights, international labour standards, environmental impact, prevention of corruption, etc.), human capital, supply chain, products and services;
- Governance: governance structure, market behaviour.

The ESG analysis team defines a sector-based reference for key issues (ESG issues listed above), by selecting the most important issues for each sector of activity. Based on this reference, an ESG score is calculated out of 10 for each issuer, which includes, first, the key issue scores for E and S and, second, scores for G issues along with any bonuses/penalties.

Indicators used to establish this ESG score include, for example:

- Scope 1 carbon emissions in tonnes of CO₂, water consumption in cubic metres, nitrogen oxide emissions in tonnes for the environmental pillar;
- the information security policies in place and the frequency of system audits, the number of fatal accidents, the percentage of the total workforce represented by collective labour agreements for the social pillar;
- the total number of directors, the percentage of independent members of the board of directors, the total remuneration as a % of fixed salary for the governance pillar.

Issuers' ESG ratings are calculated quarterly, while underlying data are updated at least every 18 months. Ratings can also be adjusted by analysis of controversies or as a result of engagement initiatives. This analysis is carried out using a dedicated proprietary tool for automating the quantitative processing of ESG data (mainly provided by ESG rating agencies, but also by specialised agencies), combined with an analysis by the ESG analysis team.

However, we could face certain methodological limitations such as:

- ✓ a problem associated with non-disclosure or incomplete disclosure by certain companies of information that is used as input for the rating model;
- ✓ a problem associated with the quantity and quality of ESG data to be processed.

Details of the issuers' ESG rating methodology are provided in the document entitled Responsible Investment Policy. This document is available at: https://www.ofi-invest-am.com/pdf/principes-et-politiques/politique-investissement-responsable.pdf

Ofi Invest Asset Management has also identified risk areas for its investments in relation to certain business sectors and international benchmarks. Therefore, the Management Company has introduced exclusionary policies to minimise these risks and manage its reputational risk.

Therefore, the Sub-Fund complies with the policies summarised in the document entitled "Investment Policy - Sector-based and Norm-based Exclusions". This document is available at: https://www.ofi-invest-am.com/pdf/principes-et-politiques/politique-exclusions-sectorielles-et-normatives ofi-invest-am.pdf

All the exclusion policies are available at: https://www.ofi-invest-am.com

Good governance

and tax compliance.

practices include sound management

structures, employee relations, remuneration of staff What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-Fund does not commit to reducing the investment universe prior to the application of the investment strategy

What is the policy to assess good governance practices of the investee companies?

Several methods are implemented to assess good governance practices of the investee companies:

- 1. Analysis of governance practices within the ESG analysis (pillar G). For each Issuer, the ESG analysis incorporates an analysis of corporate governance, with the following themes and issues:
 - Its governance structure: Respect for minority shareholder rights The composition and operation of boards or committees, Remuneration of executives, Accounts, audits and taxation;
 - And its market behaviour: Business practices.
- 2. Weekly monitoring of ESG controversies: the ESG analysis also takes into account the presence of controversies on the above-mentioned themes and their management by issuers.
- 3. The Management Company's exclusion policy related to the UN Global Compact, including its Principle 10: "Businesses should work against corruption in all its forms, including extortion and bribery". Companies which are dealing with serious and/or systemic controversies on this principle on a recurrent or frequent basis, and which have not implemented appropriate remedial measures, are excluded from the investment universe.
- 4. The voting and shareholder engagement policy²: This policy is based on the most rigorous governance standards (G20/OECD Principles of Corporate Governance, AFEP-MEDEF Code, etc.). Firstly, in connection with the voting policy, the Management Company may have recourse to several actions in the context of general meetings (dialogue, written questions, filing of resolutions, protest votes, etc.). In addition, the engagement policy is reflected in dialogue with certain companies, not only in order to have additional information on their CSR strategy, but also to encourage them to improve their practices, particularly in terms of governance.

What is the asset allocation planned for this financial product?

At least 80% of the net assets of the Sub-Fund are made up of investments contributing to the promotion of environmental and social characteristics (#1 Aligned with E/S characteristics).

Within the #2 Other component:

- The proportion of all securities that do not have an ESG score may not exceed 10% of the Sub-Fund's assets.
- A maximum of 10% of the Sub-Fund's investments will consist of cash and derivatives.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
 capital
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

² This policy applies according to the asset class of the UCIs and therefore, primarily to UCIs exposed to equities.

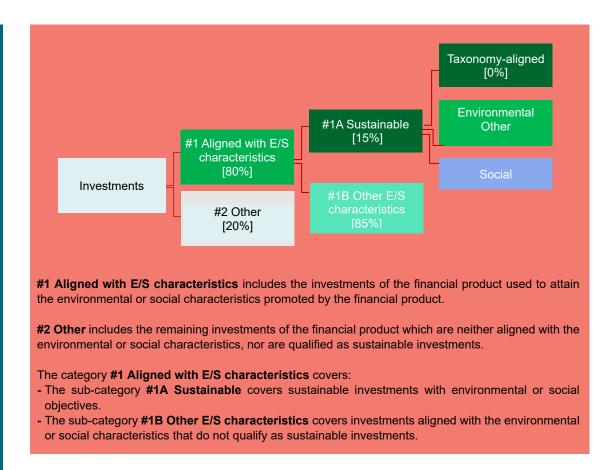

¹ https://pactemondial.org/decouvrir/dix-principes-pacte-mondial-nations-unies/#lutte-contre-la-corruption

This policy applies according to the asset class of the UCIs and therefore, primarily to UCIs exposed to equities.

- operational expenditure (OpEx) reflecting green operational activities of investee companies.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The use of derivatives will not aim to attain E/S characteristics. However, their use will not result in the environmental and/or social characteristics promoted by the Sub-Fund being significantly or permanently distorted.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-Fund does not currently make any minimum commitments to align its activities with the Taxonomy Regulation. Accordingly, the minimum investment percentage aligned with the EU Taxonomy to which the Sub-Fund commits is 0%.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy³?

☐ Yes

☐ In fossil gas

□ In nuclear energy

⊠ No

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin.

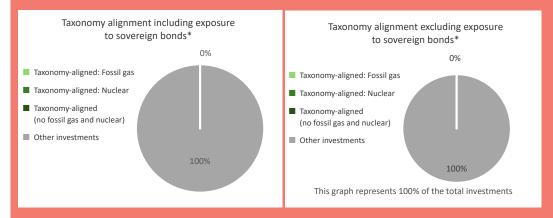

The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

^{*} For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What is the minimum share of investments in transitional and enabling activities?

Not applicable

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

As outlined under the heading "Does this financial product have a sustainable investment objective?", this product aims to invest at least 15% of its net assets in sustainable investments. However, the product does not make any commitment on the weight of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

As outlined under the heading "Does this financial product have a sustainable investment objective?", this product aims to invest at least 15% of its net assets in sustainable investments. However, the product does not make any commitment on the weight of socially sustainable investments.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

These investments, which are made only in specific situations and represent a maximum of 20% of the Sub-Fund's investments, will consist of:

- Cash and derivatives which are limited to specific situations in order to allow occasional hedging against or exposure to market risks within a total limit of 10%,
- All securities that do not have an ESG score up to a limit of 10%.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

The comparison SRI universe is consistent with the Sub-Fund's reference benchmark.

The comparison SRI index is the EMEA Convertible Bonds universe (Europe, Middle East, Africa), made up of all convertible securities issued over the EMEA perimeter.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product? Not applicable.
- How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis? Not applicable.
- How does the designated index differ from a broad market index? Not applicable.
- Where can the methodology used for the calculation of the designated index be found? Not applicable.
