Investment commentary

Fast Retailing's results released in early October highlighted an important shift in Uniqlo's international profile. For the first time, combined sales in Europe and North America exceeded those generated in Greater China, which for many years had been the Japanese group's largest international market.

For the financial year ended August, combined revenue from Europe and North America reached close to ¥878 billion, compared with ¥724 billion in Greater China. Revenue increased by almost 39% in Europe and approximately 35% in North America. This strong performance contributed to Fast Retailing recording a fifth consecutive year of record operating profit.

More importantly, the development reflects a geographical diversification that has accelerated in recent years. China remains a significant market and itself returned to growth during the year, but Uniqlo is becoming less dependent on a single region to drive its international expansion. Europe and North America are progressively becoming substantial growth pillars for the group.

The strategy is based less on rapidly increasing the number of stores than on opening larger, well-located locations that can strengthen the visibility of the brand. Fast Retailing has placed particular emphasis on flagship stores, better coordination between products, merchandising and brand communication, and adapting parts of its product offering to local trends. This approach has helped Uniqlo broaden its customer base beyond its traditional positioning in functional apparel and everyday basics.

The group also retains particularly ambitious long-term objectives. Founder Tadashi Yanai reiterated his goal of eventually increasing annual revenue to ¥10 trillion, compared with just under ¥4 trillion today, targeting annual growth of approximately ¥500 billion.

Uniqlo's development therefore provides a good example of how selected Japanese companies are transforming domestic expertise into genuinely global brands. Following its expansion across Asia, stronger growth in Europe and North America is now opening a new phase in the group's internationalisation.

Companies are mentioned for information only. This is neither an offer to sell nor a solicitation to buy securities. Past performance is not a reliable indicator of future performance. Securities and sectors are presented for information only and may be missing from the portfolio at certain times. This is not a recommendation to buy or sell.

Glossary

ALPHA

Alpha is equal to the average return on the product, i.e. the value added by the manager after deducting market influences over which the manager has no control. This calculation is expressed as a percentage.

BETA

Beta is an indicator of a fund's sensitivity relative to its benchmark. A fund with a beta of less than 1 is likely to fall less than its benchmark, while a fund with a beta of greater than 1 is likely to fall further than its benchmark.

RECOVERY PERIOD

The recovery period (expressed in days) is the number of days needed to recoup the losses incurred after a maximum loss is sustained. Maximum loss is the largest loss the fund has experienced.

SRRI

The SRRI (Synthetic Risk & Reward Indicator: Risk indicator based on the volatility over a period of 260 weeks). Historic data such as those used to calculate the synthetic indicator may not be a reliable indication of the future risk profile. The risk category associated with this Fund is not guaranteed and may change over time. The lowest category does not mean «riskfree».

TRACKING ERROR

Tracking error is a measure of the risk taken by a fund relative to its benchmark. It is given by the annualised standard deviation of a fund's performance relative to its benchmark. The lower the tracking error, the closer the fund's risk profile is to that of its benchmark.

VOLATILITY

Volatility denotes the annualised standard deviation of returns in a historical series (fund/index). It quantifies a fund's risk by indicating how dispersed around the average the fund's returns are.
The volatility of a money market fund is typically less than 1%. It is around 0.4% (or 40 basis points of volatility) for such funds. However, the volatility of an equity fund, which is invested in a riskier asset class, is often greater than 10%.

SHARPE RATIO

The Sharpe ratio measures the difference between the return on a portfolio and the risk-free rate of return (i.e. the risk premium), divided by the standard deviation of the return on that portfolio (volatility). A high Sharpe ratio is considered good.

SFDR

The SFDR (Sustainable Finance Disclosure Regulation) is a regulation intended to promote sustainability in the European financial sector. In particular, it proposes a typology to better identify assets falling under the banner of sustainable finance, notably through three categories: Article 6, Article 8 and Article 9 funds.

SRI

The SRI (Synthetic Risk Indicator) provides an assessment of the product's risk relative to that of other products. It indicates the probability of the product incurring losses in the event of market movements or of us not being able to pay you. The risk indicator assumes that you will hold the product for the minimum recommended investment period.

SIX FINANCIAL STAR RATING

The rating is based on the analysis of the return and risk of each fund within its Europerformance category, using a minimum three-year track record. A score is calculated by comparing the fund's performance and volatility with those of its category index, and then converted into a number of stars according to a quintile ranking. A "junior" rating is applied to funds with a two- to three-year history, by linking their performance to their category index to reach the required three years. Categories or funds that are too heterogeneous, insufficiently documented, or with incomplete data are excluded from the process.

MAXIMUM DRAWDOWN

The maximum drawdown is the return over the worst possible investment period. It indicates the maximum loss an investor could have sustained if they had invested in the fund at the peak of the observation period and liquidated their investment at the lowest point in that period.

INFORMATION RATIO

The information ratio is an indicator of the extent to which a fund has underperformed or outperformed its benchmark. A positive information ratio indicates outperformance. The higher the information ratio, the better the fund. The information ratio indicates the extent to which a fund has outperformed an index, taking into account the risk incurred.
