Asset management strategy

OFI Invest Energy Strategic Metals ended October down 3.02%.

Real interest rates continued to rise in the early part of the month (up 0.30%), putting downward pressure on precious metal prices. Robust US economic numbers supported this trend and stoked fears over the impact of higher interest rates on the global economy. The Israel-Palestine conflict then fuelled a rally in metals considered safe havens, including silver (up 2.24% in the month). Platinum also benefited from news of Sibanye Stillwater's intention to close a number of mines in South Africa (up 3.17%). Palladium, still penalised by large bearish positions, did not benefit from this news, since South African mines have a fairly platinum-oriented mix (palladium/platinum/rhodium, etc.).

Industrial metals all lost ground, as did risk assets as a whole. US economic data and geopolitical risk combined to weigh on performance.

In China, major real estate developer Country Garden, which for the first time announced that it had defaulted on a US dollar bond, continued to make headlines. However, the government finally announced major steps including issuing 1 trillion yuan (€129 billion) in sovereign bonds to improve urban infrastructure and increased its 2023 budget deficit to 3.8% of GDP (compared with an initial forecast of 3%). Manufacturing activity thus seems to be stabilising in China with a PMI of around 50. Conversely, manufacturing activity remains sluggish in the US and especially Europe – something that was evident among those operators who attended LME Week in early October.

Copper held up well (down 2.35%), while demand associated with the energy transition remained solid. In particular, demand for renewables remains very buoyant in China. Copper consumption in China has risen by more than 10% in the year to date despite the downturn in the real estate sector. Moreover, the situation facing mining group First Quantum Minerals is becoming more complicated. The group, which owns a mine in Panama that accounts for 1.5% of global production, had a 20-year mining contract renewed by parliament only to be rejected a few days later following huge protests all over the country. A referendum on the issue is to be held on 17 December. The question of how value should be shared remains central, with governments and populations keen to take advantage of the financial windfall.

Nickel (down 3.56%) remains under pressure as a result of increased supply from Indonesia amid slightly weaker than expected demand for batteries, particularly in Europe and the US. However, with current prices not much above the cost of production, operators of the highest-cost mines could announce closures. Glencore announced that it would stop funding the Koniombo mine in New Caledonia in February after investing \$9 billion over the past few years. The cost of energy means the nickel industry in New Caledonia faces an uncertain future, putting the French government in a difficult situation. Lastly, the Indonesian government now has significant power, with the country accounting for over 60% of global nickel production, and any announcement on its part could be the spark that sets things ablaze.

Metal prices thus remain under pressure due to the combined effects of restrictive monetary policy and downturns in manufacturing economies. Monetary policy pressure could quickly ease if central bank rhetoric were to change over the next few weeks. Manufacturing activity could then pick up again in 2024. That being the case, current price levels could constitute an opportunity to invest over the medium term, with the rollout of low-carbon forms of energy set to quicken over that time frame.
