Investment strategy

This European convertible bond SICAV has dual aims: to seek out future European leaders through appropriate security selection and to participate in financing their projects thanks to the convexity of convertible bonds.

▶ Investment commentary

The US-Iran conflict continued to dominate markets throughout April. Despite an initial ceasefire, the Strait of Hormuz remained closed, with the result that oil prices stayed above \$100 a barrel. Against this backdrop of a pronounced energy shock, the main central banks (the Fed, the ECB and the BoJ) held interest rates unchanged. At the press conference that followed the most recent FOMC meeting, Jerome Powell said he intended to remain on the Federal Reserve's Board of Governors after the end of his term as chair. US economic data was a mixed bag: Q1 2026 GDP growth was disappointing at 2% QoQ (vs. 2.3% expected), March NFPs surprised to the upside at +178k vs. +65k expected, and unemployment fell slightly to 4.3%. In Europe, estimated eurozone annual inflation in April came in at 3% (vs. 2.5% in March), driven by the energy component. Q1 2026 GDP grew by just 0.1% and the preliminary composite PMI fell to 48.6, putting it below the 50-point threshold for the first time in 16 months. In Asia, the Chinese yuan reached a three-year high against the US dollar, buoyed by continued strong economic forecasts, strong demand for the yuan among exporters, and policy indications that Beijing was prepared to tolerate a strong yuan. This also points to a shift in geopolitical perceptions: in this context, investors appeared to view the yuan as a regional safe haven. In figures, Chinese Q1 2026 GDP exceeded expectations, up 5% YoY, the CPI rose 1% YoY in March, and growth in retail sales slowed more sharply than expected, while industrial production grew 5.7% YoY (vs. 5.3% expected). Lastly, in Japan, year-on-year inflation came in at 1.5% in March and the Core CPI forecast for Q2 2026 was upgraded to 2.8% (previously 1.9%).

In this still uncertain environment, European equity markets performed remarkably well, with the Stoxx 600 gaining 5.4%, the Euro Stoxx 50 6.2%, the banking sector 8.8% and the US market 10.4%. In credit, the 5-year Crossover tightened 60 bps to 293 bps, while German 10-year yields ended the month unchanged at 3.04%. In currencies, the euro appreciated against the US dollar (up 1.5%) but lost ground against sterling (down 1.3%) and the Swiss franc (down 0.8%). Meanwhile, convertible bonds benefited fully from the prevailing volatility, with the FTSE Convertibles Europe Focus Hdq index (€) gaining 3.15% in the month.

Activity resumed in the European primary market for convertibles as markets rose, with issues totalling €1.2 billion in the month via Siemens/JPM 0% 2031 (€375m; Germany; industrial goods and services), Aixtron 0% 2031 (€450m; Germany; technology) and Basic-Fit 2.5% 2031 (€308m; France; travel and leisure). This brings total issues in the year to date to €5.7 billion, 70% higher than at end April 2025.

The fund outperformed significantly, with the tech and industrial goods and services sectors putting in strong performances. As regards individual holdings, the negative contributors were few and far between, the main ones being Qiagen 2031 and 2032 (-23 bps in total), Kering/Cara 2030 (-12 bps), Eni 2030 (-9 bps) and BNP 2031 (-2 bps). Conversely, positive contributors included STM 2027 and STM/Barc 2031 (+185 bps), BE Semiconductor 2029 (+75 bps), Prysmian (+66 bps), Schneider 2030 and 2031 (+47 bps in total), Aurubis/Salzgitter 2032 (+36 bps), Saipem 2029 (+27 bps), Legrand 2033 (+20 bps) and Spie 2028 (+20 bps).

In terms of changes, we took on more exposure to the banking sector through BNP 2031 and the defence sector via MTU 2033 ahead of earnings reports. We sold Davide Campari/Lagfin 2028 and Davide Campari 2029, which are no longer attractive, and sold some of our Prysmian shares as the share price rose.

Glossary

ALPHA	<p>Alpha is equal to the average return on the product, i.e. the value added by the manager after deducting market influences over which the manager has no control. This calculation is expressed as a percentage.</p>	BETA	<p>Beta is an indicator of a fund's sensitivity relative to its benchmark. A fund with a beta of less than 1 is likely to fall less than its benchmark, while a fund with a beta of greater than 1 is likely to fall further than its benchmark.</p>
SFDR	<p>The SFDR (Sustainable Finance Disclosure Regulation) is a regulation intended to promote sustainability in the European financial sector. In particular, it proposes a typology to better identify assets falling under the banner of sustainable finance, notably through three categories: Article 6, Article 8 and Article 9 funds.</p>	SRI	<p>The SRI (Synthetic Risk Indicator) provides an assessment of the product's risk relative to that of other products. It indicates the probability of the product incurring losses in the event of market movements or of us not being able to pay you. The risk indicator assumes that you will hold the product for the minimum recommended investment period.</p>
INFORMATION RATIO	<p>The information ratio is an indicator of the extent to which a fund has underperformed or outperformed its benchmark. A positive information ratio indicates outperformance. The higher the information ratio, the better the fund. The information ratio indicates the extent to which a fund has outperformed an index, taking into account the risk incurred.</p>	SHARPE RATIO	<p>The Sharpe ratio measures the difference between the return on a portfolio and the risk-free rate of return (i.e. the risk premium), divided by the standard deviation of the return on that portfolio (volatility). A high Sharpe ratio is considered good.</p>
EQUITY SENSITIVITY	<p>A convertible fund's delta is a measure of how sensitive its value is to changes in the price of the underlying equities. It indicates the fund's proportional equity exposure: a delta of 0.5 means the fund will react as if it were 50% composed of equities.</p>	SIX FINANCIAL STAR RATING	<p>The rating is based on the analysis of the return and risk of each fund within its Europerformance category, using a minimum three-year track record. A score is calculated by comparing the fund's performance and volatility with those of its category index, and then converted into a number of stars according to a quintile ranking. A "junior" rating is applied to funds with a two- to three-year history, by linking their performance to their category index to reach the required three years. Categories or funds that are too heterogeneous, insufficiently documented, or with incomplete data are excluded from the process.</p>
TRACKING ERROR	<p>Tracking error is a measure of the risk taken by a fund relative to its benchmark. It is given by the annualised standard deviation of a fund's performance relative to its benchmark. The lower the tracking error, the closer the fund's risk profile is to that of its benchmark.</p>	VOLATILITY	<p>Volatility denotes the annualised standard deviation of returns in a historical series (fund/index). It quantifies a fund's risk by indicating how dispersed around the average the fund's returns are. The volatility of a money market fund is typically less than 1%. It is around 0.4% (or 40 basis points of volatility) for such funds. However, the volatility of an equity fund, which is invested in a riskier asset class, is often greater than 10%.</p>
		RECOVERY PERIOD	<p>The recovery period (expressed in days) is the number of days needed to recoup the losses incurred after a maximum loss is sustained. Maximum loss is the largest loss the fund has experienced.</p>
		SRR	<p>The SRR (Synthetic Risk & Reward Indicator: Risk indicator based on the volatility over a period of 260 weeks). Historic data such as those used to calculate the synthetic indicator may not be a reliable indication of the future risk profile. The risk category associated with this Fund is not guaranteed and may change over time. The lowest category does not mean «riskfree».</p>
		SCR	<p>The Solvency Capital Ratio (SCR) is a regulatory ratio that measures the level of capital an insurer must hold to cover all its risks, with a one-year confidence level of 99.5%. It aims to guarantee that insurers can cope with extreme events and protect their policyholders.</p>
		MAXIMUM DRAWDOWN	<p>The maximum drawdown is the return over the worst possible investment period. It indicates the maximum loss an investor could have sustained if they had invested in the fund at the peak of the observation period and liquidated their investment at the lowest point in that period.</p>
