### ▶ Investment commentary

Over the course of the month, European markets continued their rebound despite an ongoing geopolitical crisis in the Middle East. The Strait of Hormuz remains severely disrupted, and conflicting signals continue to emerge regarding the status of a compromise between the United States, Israel, and Iran. However, oil prices fell sharply during the month, reflecting investors' growing confidence in an agreement to extend the ceasefire and allow for a return to normal traffic in the Strait of Hormuz. In Europe, business sentiment deteriorated further, with the composite PMI index falling to its lowest level in three years. Consumer confidence also remained weak, despite a slight increase over the month. On a sectoral basis, the rebound was led by technology stocks, driven by the AI theme, and the travel & leisure sector, supported by lower oil prices and optimism surrounding a deal. Conversely, it was a difficult month for the energy and utilities sectors.

In terms of performance, the fund outperformed its benchmark index, driven by both sector allocation and stock selection. Over the month, the fund benefited from its underweight position in the energy sector and its overweight position in technology. Regarding stock selection, the underweight positions in Infineon and Deutsche Telekom contributed negatively to performance, offset by the absence of Rheinmetall and RWE as well as the overweight positions in Prysmian and Akzo.

Glossary

<p><b>ALPHA</b></p> <p>Alpha is equal to the average return on the product, i.e. the value added by the manager after deducting market influences over which the manager has no control. This calculation is expressed as a percentage.</p>	<p><b>BETA</b></p> <p>Beta is an indicator of a fund's sensitivity relative to its benchmark. A fund with a beta of less than 1 is likely to fall less than its benchmark, while a fund with a beta of greater than 1 is likely to fall further than its benchmark.</p>	<p><b>RECOVERY PERIOD</b></p> <p>The recovery period (expressed in days) is the number of days needed to recoup the losses incurred after a maximum loss is sustained. Maximum loss is the largest loss the fund has experienced.</p>
<p><b>SRR</b></p> <p>The SRR (Synthetic Risk &amp; Reward Indicator: Risk indicator based on the volatility over a period of 260 weeks). Historic data such as those used to calculate the synthetic indicator may not be a reliable indication of the future risk profile. The risk category associated with this Fund is not guaranteed and may change over time. The lowest category does not mean «riskfree».</p>	<p><b>TRACKING ERROR</b></p> <p>Tracking error is a measure of the risk taken by a fund relative to its benchmark. It is given by the annualised standard deviation of a fund's performance relative to its benchmark. The lower the tracking error, the closer the fund's risk profile is to that of its benchmark.</p>	<p><b>VOLATILITY</b></p> <p>Volatility denotes the annualised standard deviation of returns in a historical series (fund/index). It quantifies a fund's risk by indicating how dispersed around the average the fund's returns are. The volatility of a money market fund is typically less than 1%. It is around 0.4% (or 40 basis points of volatility) for such funds. However, the volatility of an equity fund, which is invested in a riskier asset class, is often greater than 10%.</p>
<p><b>SHARPE RATIO</b></p> <p>The Sharpe ratio measures the difference between the return on a portfolio and the risk-free rate of return (i.e. the risk premium), divided by the standard deviation of the return on that portfolio (volatility). A high Sharpe ratio is considered good.</p>	<p><b>SFDR</b></p> <p>The SFDR (Sustainable Finance Disclosure Regulation) is a regulation intended to promote sustainability in the European financial sector. In particular, it proposes a typology to better identify assets falling under the banner of sustainable finance, notably through three categories: Article 6, Article 8 and Article 9 funds.</p>	<p><b>SRI</b></p> <p>The SRI (Synthetic Risk Indicator) provides an assessment of the product's risk relative to that of other products. It indicates the probability of the product incurring losses in the event of market movements or of us not being able to pay you. The risk indicator assumes that you will hold the product for the minimum recommended investment period.</p>
<p><b>SIX FINANCIAL STAR RATING</b></p> <p>The rating is based on the analysis of the return and risk of each fund within its Europe performance category, using a minimum three-year track record. A score is calculated by comparing the fund's performance and volatility with those of its category index, and then converted into a number of stars according to a quintile ranking. A "junior" rating is applied to funds with a two- to three-year history, by linking their performance to their category index to reach the required three years. Categories or funds that are too heterogeneous, insufficiently documented, or with incomplete data are excluded from the process.</p>	<p><b>MAXIMUM DRAWDOWN</b></p> <p>The maximum drawdown is the return over the worst possible investment period. It indicates the maximum loss an investor could have sustained if they had invested in the fund at the peak of the observation period and liquidated their investment at the lowest point in that period.</p>	<p><b>INFORMATION RATIO</b></p> <p>The information ratio is an indicator of the extent to which a fund has underperformed or outperformed its benchmark. A positive information ratio indicates outperformance. The higher the information ratio, the better the fund. The information ratio indicates the extent to which a fund has outperformed an index, taking into account the risk incurred.</p>
