Investment commentary

The European high-yield market lost 0.9% in October, following a 1.6% fall in September. This was the first time the market had posted two consecutive monthly falls since early 2023. The market was penalised in particular by a sharp increase in credit premiums (up 55 bps) amid continuing fears over the economic situation in Europe: rising inflation fuelled by high energy prices and its potential implications for eurozone growth; budget problems in France and a sharp widening in French spreads (with the 10-year France-Germany spread widening 38 bps in October); consumer confidence at rock bottom and protests in a number of European countries; and so on. Against this challenging backdrop, although a rate hike was discussed, the ECB opted to hold interest rates steady at the end of the month, with financial conditions having already tightened since its previous monetary policy meeting.

By rating, dispersion between single-Bs and BBs rose sharply (up 52 bps in the month), with the spread between the two rating categories ending the month at 240 bps, a level not seen since the launch of US military operations against Iran in March. Single-Bs ended the month down 1.5%, compared with a 0.3% loss for BBs. In this strongly risk-averse environment, CCCs also declined sharply, losing 5.6%. By issuer, the month's biggest losers included telecoms operators Virgin Media and Ziggo, penalised by challenging operating trends and high levels of debt. Lastly, by sector, beyond telecoms, the real estate sector fell sharply (down 2.6%), with a significant repricing of hybrid bonds issued by European real estate companies.

The fund outperformed its benchmark in the month. On the macro front, the fund benefited in the early part of the month from its duration overweight via futures. The position was cut during the month. It also benefited from its lack of exposure to Tele Colombus as well as Altice International, locked in a struggle with its creditors. Lastly, the fund benefited from its relative underexposure to Ziggo. Conversely, performance was adversely affected by the fund's overexposure to Virgin Media and real estate firm Grand City Properties.

In keeping with conditions in late September, the primary market had a relatively sluggish start to October amid increased spread volatility, before picking up towards the end of the month, notably thanks to a sizeable refinancing exercise by Recordati involving €4.5 billion of euro-denominated high-yield bonds and $1.6 billion of dollar-denominated bonds. Other activity in the month included first-time issues by Bending Spoons and Contitech and refinancing issues by Inpost, Betclic, Paprec, Saur, Cheplapharm and SGL.

In terms of flows, the European high-yield market saw a second consecutive month of net outflows in October, though on a relatively limited scale (-€400 million) and with flows turning positive in the second half of the month. This brings year-to-date net inflows down to €2.6 billion. The US market also saw a second month of net outflows, posting monthly net outflows of $1.2 billion (bringing year-to-date net inflows to $6.3 billion).

Companies are mentioned for information only. This is neither an offer to sell nor a solicitation to buy securities. Past performance is not a reliable indicator of future performance. Securities and sectors are presented for information only and may be missing from the portfolio at certain times. This is not a recommendation to buy or sell.

Glossary

ALPHA

Alpha is equal to the average return on the product, i.e. the value added by the manager after deducting market influences over which the manager has no control. This calculation is expressed as a percentage.

AVERAGE SPREAD

A fund's average spread is the average yield spread between the bonds held by the fund and a benchmark (often government bonds). It reflects the amount of risk taken by the fund relative to securities considered risk-free.

AVERAGE RATING

A fund's average rating is the weighted average credit rating of the bonds that make up the fund's portfolio. It reflects the fund's overall credit quality: the higher the rating, the lower the risk of default.

CREDIT SENSITIVITY

A fund's credit sensitivity is a measure of how much the fund's value changes as the credit spreads of the bonds held by the fund change. It indicates the fund's exposure to the risk of a deterioration in issuer credit quality.

DURATION

A bond's duration is the time it takes to receive the discounted average present value of all associated cash flows (principal and interest), expressed in years.

TRACKING ERROR

Tracking error is a measure of the risk taken by a fund relative to its benchmark. It is given by the annualised standard deviation of a fund's performance relative to its benchmark. The lower the tracking error, the closer the fund's risk profile is to that of its benchmark.

BETA

Beta is an indicator of a fund's sensitivity relative to its benchmark. A fund with a beta of less than 1 is likely to fall less than its benchmark, while a fund with a beta of greater than 1 is likely to fall further than its benchmark.

SRI

The SRI (Synthetic Risk Indicator) provides an assessment of the product's risk relative to that of other products. It indicates the probability of the product incurring losses in the event of market movements or of us not being able to pay you. The risk indicator assumes that you will hold the product for the minimum recommended investment period.

INFORMATION RATIO

The information ratio is an indicator of the extent to which a fund has underperformed or outperformed its benchmark. A positive information ratio indicates outperformance. The higher the information ratio, the better the fund. The information ratio indicates the extent to which a fund has outperformed an index, taking into account the risk incurred.

MODIFIED DURATION

Modified duration is a measure of how far the price of a bond or the net asset value of a bond UCITS rises or falls in response to a 1% fluctuation in market interest rates.

SIX FINANCIAL STAR RATING

The rating is based on the analysis of the return and risk of each fund within its Europerformance category, using a minimum three-year track record. A score is calculated by comparing the fund's performance and volatility with those of its category index, and then converted into a number of stars according to a quintile ranking. A "junior" rating is applied to funds with a two- to three-year history, by linking their performance to their category index to reach the required three years. Categories or funds that are too heterogeneous, insufficiently documented, or with incomplete data are excluded from the process.

VOLATILITY

Volatility denotes the annualised standard deviation of returns in a historical series (fund/index). It quantifies a fund's risk by indicating how dispersed around the average the fund's returns are.
The volatility of a money market fund is typically less than 1%. It is around 0.4% (or 40 basis points of volatility) for such funds. However, the volatility of an equity fund, which is invested in a riskier asset class, is often greater than 10%.

RECOVERY PERIOD

The recovery period (expressed in days) is the number of days needed to recoup the losses incurred after a maximum loss is sustained. Maximum loss is the largest loss the fund has experienced.

SRRI

The SRRI (Synthetic Risk & Reward Indicator: Risk indicator based on the volatility over a period of 260 weeks). Historic data such as those used to calculate the synthetic indicator may not be a reliable indication of the future risk profile. The risk category associated with this Fund is not guaranteed and may change over time. The lowest category does not mean «riskfree».

SHARPE RATIO

The Sharpe ratio measures the difference between the return on a portfolio and the risk-free rate of return (i.e. the risk premium), divided by the standard deviation of the return on that portfolio (volatility). A high Sharpe ratio is considered good.

SFDR

The SFDR (Sustainable Finance Disclosure Regulation) is a regulation intended to promote sustainability in the European financial sector. In particular, it proposes a typology to better identify assets falling under the banner of sustainable finance, notably through three categories: Article 6, Article 8 and Article 9 funds.

MAXIMUM DRAWDOWN

The maximum drawdown is the return over the worst possible investment period. It indicates the maximum loss an investor could have sustained if they had invested in the fund at the peak of the observation period and liquidated their investment at the lowest point in that period.
