SRI (Synthetic Risk Indicator): The Synthetic Risk Indicator allows you to assess the level of risk of this product compared to others. It indicates the probability that this product will suffer losses in the event of market movements or our inability to pay you. The risk indicator assumes that you keep the product for the recommended minimum investment period.

MARUBENI CORP	WHOLESALE TRADE	0.0%	-0.7%
JAPAN TOBACCO INC	FOODS	0.0%	-0.7%

■ Commentary

In fund management, we remain focused on companies with strong brands and strategies targeting the fast-growing neighboring Asian markets. We are also investing on domestic themes like Tourism and Health, as well as long-term themes centered around the Asian middle class and robotics. Hanoi’s convenience store market is heating up with the recent arrivals of Japanese chain 7-Eleven and South Korea’s GS25, both challenging long-time leader Circle K. GS25 opened its first Hanoi store in March 2025, followed by 7-Eleven in June, which launched a location on Lo Su Street in the heart of the city’s Old Quarter. This marks 7-Eleven’s northern expansion, having already established 120 stores in Ho Chi Minh City since its Vietnamese debut in 2017. Until now, Circle K – an American brand operated locally by a Hong Kong group – had dominated the Hanoi market. Foreign brands typically entered Vietnam through Ho Chi Minh City, often bypassing the capital. The Old Quarter offers high visibility among locals and tourists, especially younger consumers who value cleanliness and modern retail formats, though rents there can reach \$100–\$200 per square meter per month – similar to rates in central Tokyo. Both 7-Eleven and GS25 feature a similar layout: narrow storefronts with shelves on the ground floor and an upstairs area for dining. Each store highlights its own cultural identity: 7-Eleven’s top seller is a toasted ham and cheese sandwich priced at 27,000 dong (about \$1), while GS25 offers a wide variety of Korean-style meals such as gimbab and fried rice, accompanied by Korean pop music. Prices are slightly higher than those in traditional markets and supermarkets. For instance, tea-based drinks with toppings can cost over 30,000 dong, compared to less than 25,000 dong at Chinese competitor Mixue. This price gap raises questions among consumers about daily affordability. 7-Eleven is already preparing to open another store in Capital Place, an office complex that hosts numerous Japanese companies – a move that underscores its long-term strategy and targeted approach in Hanoi.

■ Definitions

Tracking error is a measure of a fund's relative risk relative to its benchmark. It is given by the annualized standard deviation of a fund's relative performance relative to its benchmark. The lower it is, the more the fund has a risk profile close to its benchmark.

The **Sharpe Ratio** measures how much a portfolio returns relative to the rate of return on a risk-free investment (risk premium) divided by a standard deviation of the portfolio's return (volatility). A high Sharpe ratio is a good indicator.

The **maximum drawdown** is the return on the worst possible investment period. It indicates the maximum loss that an investor could have suffered had he bought the fund at the peak of the observation period and sold it at a low during this period.
