▶ Investment commentary

Seven & i Holdings is accelerating the global expansion of its 7-Eleven network, targeting 100,000 stores by 2030, up roughly 14,000 from today. With the Japanese market now mature, future growth depends largely on international markets. However, performance remains uneven: Japan and North America generate similar operating profits (around ¥220 billion each), while other regions such as China and Australia are still loss-making, highlighting structural challenges in the current model.

Historically, overseas growth relied on exporting the Japanese franchise model, combining product standards and operational know-how. In practice, this approach often failed to align with local consumer preferences and supply chain realities. Management now acknowledges that simply replicating the “Japan way” abroad is ineffective. As a result, the company is shifting toward a more flexible, hybrid strategy that blends Japanese operational discipline with American retail practices, while adapting more closely to local market conditions.

Australia has become a testing ground for this new approach. After taking direct control of operations in 2024, Seven & i revamped product offerings and store strategies. The introduction of more than 100 new food items and improved site selection contributed to a 9% increase in daily sales excluding tobacco, demonstrating the potential of localized execution.

Despite these early signs of progress, the company still faces a shortage of experienced international management talent, which could slow expansion. Ultimately, Seven & i is undergoing a strategic transition from a standardized global model to a more locally tailored approach. The success of this shift will be critical to sustaining long-term growth outside Japan.

Glossary

<p>ALPHA</p> <p>Alpha is equal to the average return on the product, i.e. the value added by the manager after deducting market influences over which the manager has no control. This calculation is expressed as a percentage.</p>	<p>BETA</p> <p>Beta is an indicator of a fund's sensitivity relative to its benchmark. A fund with a beta of less than 1 is likely to fall less than its benchmark, while a fund with a beta of greater than 1 is likely to fall further than its benchmark.</p>	<p>RECOVERY PERIOD</p> <p>The recovery period (expressed in days) is the number of days needed to recoup the losses incurred after a maximum loss is sustained. Maximum loss is the largest loss the fund has experienced.</p>
<p>SRR</p> <p>The SRR (Synthetic Risk & Reward Indicator: Risk indicator based on the volatility over a period of 260 weeks). Historic data such as those used to calculate the synthetic indicator may not be a reliable indication of the future risk profile. The risk category associated with this Fund is not guaranteed and may change over time. The lowest category does not mean «riskfree».</p>	<p>TRACKING ERROR</p> <p>Tracking error is a measure of the risk taken by a fund relative to its benchmark. It is given by the annualised standard deviation of a fund's performance relative to its benchmark. The lower the tracking error, the closer the fund's risk profile is to that of its benchmark.</p>	<p>VOLATILITY</p> <p>Volatility denotes the annualised standard deviation of returns in a historical series (fund/index). It quantifies a fund's risk by indicating how dispersed around the average the fund's returns are. The volatility of a money market fund is typically less than 1%. It is around 0.4% (or 40 basis points of volatility) for such funds. However, the volatility of an equity fund, which is invested in a riskier asset class, is often greater than 10%.</p>
<p>SHARPE RATIO</p> <p>The Sharpe ratio measures the difference between the return on a portfolio and the risk-free rate of return (i.e. the risk premium), divided by the standard deviation of the return on that portfolio (volatility). A high Sharpe ratio is considered good.</p>	<p>SFDR</p> <p>The SFDR (Sustainable Finance Disclosure Regulation) is a regulation intended to promote sustainability in the European financial sector. In particular, it proposes a typology to better identify assets falling under the banner of sustainable finance, notably through three categories: Article 6, Article 8 and Article 9 funds.</p>	<p>SRI</p> <p>The SRI (Synthetic Risk Indicator) provides an assessment of the product's risk relative to that of other products. It indicates the probability of the product incurring losses in the event of market movements or of us not being able to pay you. The risk indicator assumes that you will hold the product for the minimum recommended investment period.</p>
<p>SIX FINANCIAL STAR RATING</p> <p>The rating is based on the analysis of the return and risk of each fund within its Europe performance category, using a minimum three-year track record. A score is calculated by comparing the fund's performance and volatility with those of its category index, and then converted into a number of stars according to a quintile ranking. A "junior" rating is applied to funds with a two- to three-year history, by linking their performance to their category index to reach the required three years. Categories or funds that are too heterogeneous, insufficiently documented, or with incomplete data are excluded from the process.</p>	<p>MAXIMUM DRAWDOWN</p> <p>The maximum drawdown is the return over the worst possible investment period. It indicates the maximum loss an investor could have sustained if they had invested in the fund at the peak of the observation period and liquidated their investment at the lowest point in that period.</p>	<p>INFORMATION RATIO</p> <p>The information ratio is an indicator of the extent to which a fund has underperformed or outperformed its benchmark. A positive information ratio indicates outperformance. The higher the information ratio, the better the fund. The information ratio indicates the extent to which a fund has outperformed an index, taking into account the risk incurred.</p>
