### Fund objective

The objective of the mutual fund is to capture the financial potential of the Japanese economy and to offer the investor a performance in line with the evolution of the Japanese equity market, over the recommended investment period of 5 years, and by applying an SRI filter.

### Benchmark

Topix (net dividends reinvested)

### Recommended minimum investment period

5 years

### Synthetic risk (SRI)

Lowest risk

Highest risk

SRI (Synthetic Risk Indicator): The Synthetic Risk Indicator allows you to assess the level of risk of this product compared to others. It indicates the probability that this product will suffer losses in the event of market movements or our inability to pay you. The risk indicator assumes that you keep the product for the recommended minimum investment period.

Market cap breakdown

Large cap : over €10 billion.  
Mid cap : between 500 million and 10 billion €  
Small cap : less than 500 million €.

The breakdown concerns shares held directly and through transparencies.

Commentary

Daikin Industries is intensifying efforts to dominate the U.S. air conditioning market, leveraging its energy-saving technology. In December, it started producing chillers, used for large-scale air conditioning, at a new Mexican plant. This move is part of Daikin's strategy to expand in the U.S., a market traditionally led by Trane Technologies and Johnson Controls. Daikin, already a global leader in air conditioners and the top seller in Japan and Europe, ranks second in the U.S.

Daikin's goal is to become the U.S. market leader by fiscal 2025. Although its American revenue (1.33 trillion yen) exceeds that in other regions, its profit margins in the Americas (around 6%) lag behind the overall air conditioning business margin (8.9%). To enhance profitability, Daikin is focusing on both applied and residential air conditioning sectors, targeting a 10% profit margin in the Americas. The new Mexico facility, along with its Texas production hub, will support this goal. Daikin's strength in energy-efficient technology, such as inverters, has already boosted its U.S. residential air conditioner margin to around 9%. This U.S. expansion offsets slower growth in China and Europe, contributing to Daikin's expected record profits for the third consecutive year. Despite challenges in China's real estate sector and slower heat pump business growth, Daikin's U.S. success is crucial for its future, especially as it navigates a path for growth in fiscal 2024 and beyond amidst global economic headwinds.

■ Definitions

**Tracking error** is a measure of a fund's relative risk relative to its benchmark. It is given by the annualized standard deviation of a fund's relative performance relative to its benchmark. The lower it is, the more the fund has a risk profile close to its benchmark.

The **Sharpe Ratio** measures how much a portfolio returns relative to the rate of return on a risk-free investment (risk premium) divided by a standard deviation of the portfolio's return (volatility). A high Sharpe ratio is a good indicator.

The **maximum drawdown** is the return on the worst possible investment period. It indicates the maximum loss that an investor could have suffered had he bought the fund at the peak of the observation period and sold it at a low during this period.

The **carbon intensity** represents the total greenhouse gas (GHG) emissions of scopes 1 & 2 (direct emissions and indirect emissions related to energy consumption) normalized per million of revenue (turnover). Thus, for every million dollars of revenue, X metric tons of emissions are financed.
