Investment strategy

This European convertible bond SICAV has dual aims: to seek out future European leaders through appropriate security selection and to participate in financing their projects thanks to the convexity of convertible bonds.

Investment commentary

Central banks maintained the status quo last month... In the United States, the Fed kept its policy rate unchanged, with Kevin Warsh pointing to an upward growth trend and low unemployment. The ECB also held rates unchanged, with Christine Lagarde indicating that the December decision would be based on a broader set of data. In Japan, the BoJ maintained its policy rate at 1.25%, as widely expected, leaving the door open for a hike as soon as December. On the statistical front, US inflation quickened to 3.7% YoY in September (vs. 3.6% expected), PMIs came in significantly higher than expected, and annualised Q3 GDP growth came in at 3.4, making a December rate hike a near certainty. In the eurozone, September inflation was confirmed at 3.8% YoY, driven by energy prices, whose contribution to inflation exceeded that of services. While Q3 GDP growth slowed to 0.4% QoQ (or 1.3% YoY), the flash composite PMI fell to 51.9 in October as new orders declined for the first time in seven months. In Asia, Chinese inflation in September came in at 0.9% YoY, slightly below expectations, while Japanese inflation was in line with expectations at 2.1% YoY.

Against this backdrop, European equity markets ultimately held up well despite renewed fears over AI-related spending, with the Stoxx 600 gaining 2% and the CAC 40 0.2%, while US equities lost 0.9%. In credit, the 5-year Crossover widened 25 bps to 326 bps, while German 10-year yields eased 26 bps to 3.32% amid a flight to quality. Meanwhile, convertible bonds absorbed the hit, moderately affected by credit spreads, though the asset class saw huge redemptions in the month by participants not usually active in this segment, causing implied volatilities to plummet, with the FTSE Convertibles Europe Focus Hdg index (in euros) losing 0.77% in the month.

Given the market environment, the primary European convertibles market was completely closed, with no issues at all in October. This brings total issues in the year to date to €13.8 billion, ahead of the total at the same point in 2025. Monthly issues were 33% higher than in November 2025.

As regards the fund, its underperformance was mainly down to the impact of AI-related fears on technology (-109 bps) and industrials (-101 bps), as well as the decline in commodities (-78 bps). Sectors that made positive contributions were financial services (+21 bps), utilities (+20 bps) and healthcare (+20 bps). As regards individual holdings, the negative contributors were Schneider Electric 2031, 2033 and 2034 (-62 bps), Sibanye-Stillwater 2028 (-37 bps), Soitec 2033 (-30 bps), BE Semiconductor (-28 bps), Aurubis/Salzgitter 2032 (-21 bps), AT&S Perp Call 3031 (-21 bps), STM 2031 and 2033 (-21 bps) and Kering/Cara 2030 (-20 bps). Conversely, the positive contributors were ENI 2030 (+24 bps), Iberdrola 2030 (+17 bps), Deutsche Boerse 2031 (+15 bps) and Pharming 2029 (+12 bps).

In terms of changes, we took some of our profits on ENI 2030, Saipem 2029, Iberdrola 2030 and Deutsche Boerse 2031 – all of which had put in strong performances to date – with the goal of reducing the portfolio's overall exposure. We also sold LEG Immobilien 2029 and LVMH/Citi 2029 to free up cash. Lastly, we added a new position in Aixtron 2031, whose underlying had fallen sharply in the wake of the AI sector.

Companies are mentioned for information only. This is neither an offer to sell nor a solicitation to buy securities. Past performance is not a reliable indicator of future performance. Securities and sectors are presented for information only and may be missing from the portfolio at certain times. This is not a recommendation to buy or sell.

Glossary

ALPHA

Alpha is equal to the average return on the product, i.e. the value added by the manager after deducting market influences over which the manager has no control. This calculation is expressed as a percentage.

BETA

Beta is an indicator of a fund's sensitivity relative to its benchmark. A fund with a beta of less than 1 is likely to fall less than its benchmark, while a fund with a beta of greater than 1 is likely to fall further than its benchmark.

RECOVERY PERIOD

The recovery period (expressed in days) is the number of days needed to recoup the losses incurred after a maximum loss is sustained. Maximum loss is the largest loss the fund has experienced.

SFDR

The SFDR (Sustainable Finance Disclosure Regulation) is a regulation intended to promote sustainability in the European financial sector. In particular, it proposes a typology to better identify assets falling under the banner of sustainable finance, notably through three categories: Article 6, Article 8 and Article 9 funds.

SRI

The SRI (Synthetic Risk Indicator) provides an assessment of the product's risk relative to that of other products. It indicates the probability of the product incurring losses in the event of market movements or of us not being able to pay you. The risk indicator assumes that you will hold the product for the minimum recommended investment period.

SRRI

The SRRI (Synthetic Risk & Reward Indicator: Risk indicator based on the volatility over a period of 260 weeks). Historic data such as those used to calculate the synthetic indicator may not be a reliable indication of the future risk profile. The risk category associated with this Fund is not guaranteed and may change over time. The lowest category does not mean «riskfree».

INFORMATION RATIO

The information ratio is an indicator of the extent to which a fund has underperformed or outperformed its benchmark. A positive information ratio indicates outperformance. The higher the information ratio, the better the fund. The information ratio indicates the extent to which a fund has outperformed an index, taking into account the risk incurred.

SHARPE RATIO

The Sharpe ratio measures the difference between the return on a portfolio and the risk-free rate of return (i.e. the risk premium), divided by the standard deviation of the return on that portfolio (volatility). A high Sharpe ratio is considered good.

SCR

The Solvency Capital Ratio (SCR) is a regulatory ratio that measures the level of capital an insurer must hold to cover all its risks, with a one-year confidence level of 99.5%. It aims to guarantee that insurers can cope with extreme events and protect their policyholders.

EQUITY SENSITIVITY

A convertible fund's delta is a measure of how sensitive its value is to changes in the price of the underlying equities. It indicates the fund's proportional equity exposure: a delta of 0.5 means the fund will react as if it were 50% composed of equities.

SIX FINANCIAL STAR RATING

The rating is based on the analysis of the return and risk of each fund within its Europerformance category, using a minimum three-year track record. A score is calculated by comparing the fund's performance and volatility with those of its category index, and then converted into a number of stars according to a quintile ranking. A "junior" rating is applied to funds with a two- to three-year history, by linking their performance to their category index to reach the required three years. Categories or funds that are too heterogeneous, insufficiently documented, or with incomplete data are excluded from the process.

MAXIMUM DRAWDOWN

The maximum drawdown is the return over the worst possible investment period. It indicates the maximum loss an investor could have sustained if they had invested in the fund at the peak of the observation period and liquidated their investment at the lowest point in that period.

TRACKING ERROR

Tracking error is a measure of the risk taken by a fund relative to its benchmark. It is given by the annualised standard deviation of a fund's performance relative to its benchmark. The lower the tracking error, the closer the fund's risk profile is to that of its benchmark.

VOLATILITY

Volatility denotes the annualised standard deviation of returns in a historical series (fund/index). It quantifies a fund's risk by indicating how dispersed around the average the fund's returns are.
The volatility of a money market fund is typically less than 1%. It is around 0.4% (or 40 basis points of volatility) for such funds. However, the volatility of an equity fund, which is invested in a riskier asset class, is often greater than 10%.
